# HOT & COLD AISLE CONTAINMENT

# DID YOU KNOW?

A Swedish ISP has a quite interesting portfolio of data centers as data bunkers. The facility above "Pionen" is one of the state-of-art works of the data center world. The Pionen facility is built in a Cold War era nuclear bunker, and features both a standard UPS system for continuous power, and two diesel submarine engines for backup power generation.

High energy costs and increased energy consumption rates forced data center specialists to evaluate hot and cold air hosting strategies. Bot hot and cold air conservation increased the predictability and efficiency of traditional data center cooling systems. This solution system aims that providing maximum separation of hot-cold air, while the efficiency of cooling provides lower cost over time.

## COLD AISLE APPLICATION ADVANTAGES

- Easy to apply; it does not require an additional architectural structure to return to the waste air containment and cooling units (drop ceiling, air pressure, etc.).
- Only doors at the edges and a roof cover is required.
- Generally low cost
- Cold air conservation in the current data centers, easily renewable especially where there is obstruction from the top for circulation such as electricity and network distribution, ducts and lighting.
- In case of power failure cold aisle provides greater circulation area. (raised or non-raised floor.

GT-DC Plus Series Rack Cabinets

### HOT AISLE APPLICATION ADVANTAGES

- Outside area is kept cold.
- Leakage from the raised floor openings in the wide area of the corridor enters the cold area.
- Generally more effective
- Hot air conservation will be more tolerant to network cabinets and independent equipment such as storage cabinets that may have to stay outside the enclosure, for those which will stay in the lower temperature range of the computer room.
- In the hot aisle environment, it can perform better by maintaining sufficient air supply and drawing the exhaust air in data center.
- Due to the hot air conservation structure where the fire extinguishing system is merged with the ceiling it's installed, it does not take up extra space and provides the necessary clearance needed by the spray heads.

# WHAT we offer?

- ////// The highest insulation between hot and cold aisle conservation
- ////// Effective and efficient cooling.
- ////// Easy to configure, expand and customize
- ////// Adaptable for future changes and past applications
- ////// All-in-one compact solution

\* Data Center applications are given in general terms. Project needs are determined and prepared as a project file. Project file is presented before application.

# DID YOU KNOW?

A mini data center can contain only one cabinet up to 40 cabinets and is defined as an independent system designed to be containerized and corridor enclosure solutions. The system contains IT infrastructures such as power and cooling systems and contain BT infrastructure. These data centers can support the IT load up to 250 kW and are suited for disaster recovery data centers, branch office operations and endpoint computing purposes.

Due to an important part of SME's didn't make investments in the traditional data center facilities, demand for mini-data center infrastructure is growing across SME's worldwide. Compared to traditional facilities, mini data centers are low cost, flexible and scalable. In addition, there is a high probability that SMEs will prefer to install micro-data centers with the installation of the cabinet infrastructure to reduce costs. Organizations in retail, manufacturing and banking, as well as SMEs, are expected to adopt these data centers to their branches, with smaller and more temporary applications, at lower costs, to increase mobility.

## ADVANTAGES OF MINI DATA CENTER APPLICATIONS

- It is a convenient, cost-effective solution ideal for specific needs.
- Mobility is higher when compared to traditional high-volume data center implementations.
- A minimum investment is required, especially in an existing infrastructure.
- Appendability and adaptability make future expansion possible with greater flexibility.
- Mini Data Center is the perfect solution for hard to reach locations, by its easy use and installation.
- Compact solution with one or more cabinets and all-in-one compact.

The former Torre Girona Chapel on the campus of the Technical University of Catalonia is the home of the school's super computer called Mare Nostrum. Housed in a glassroom, the super computer sits inside the chapel, which was built in the 1920s. The School needed a facility and quickly converted to a home for the super computer and the chapel was chosen because of its location on campus. It predates the green data center movement, but its location within the religious setting along with the subdued lighting make for an impressive visual experience.

# WHAT we offer?

- Futuristic approach for flexible options
- Cost-effective application
- Easy to configure, expand and customize
- Ultimate security and safety
- All-in-one compact solution

# DID YOU KNOW?

## 10,000 LEAGUES UNDER THE SEA

A futuristic way of cooling a data center with sea water is to build the facility in the ocean. In 2015, a software company created a portable mini-datacenter prototype and it was sunk 30 meters deep into the California coast for more than 100 days.

The microdata center is a smaller, modular data center system designed to solve different problem sequences or to take on different workloads that can not be handled by traditional facilities or large modular data centers. Dimensions are ideal for temporary use in remote locations with versatility and plug-and-play features, for temporary distributions, or even in locations with high risk areas for floods or earthquakes.

### ADVANTAGES OF MICRO DATA CENTER APPLICATIONS

- **With the quick distribution advantage** it's suitable for mid/small datacenter applications such as government, education, finance or SMBs. Offers flexibility, short construction periods, and can be expanded at any time without the need for excessive investment.
- **Availability level can be adjusted at any time**, thus the availability level of the system can be adjusted at any stage, including design, installation or operations. The power supply system and cooling system do not need redesign.
- **Datacenter environment and security information can be connected.** The signals for the temperature and humidity of the datacenter, smoke detection, datacenter access, datacenter IP camera, and others can be connected to the standard management system. The system is plug-and-play with no need for redevelopment.
- **Highest security is possible** as the cabinet has its own locking system, it prevents non-professional staff from misusing equipment installed inside the Micro Data Center thus preventing any interruptions of function or crashes.

### Top Air Conditioner

#### Properties:

- Data center management and protection all around, such as cooling, monitoring, power
- Independent data center
- Eliminates increased cooling and external cooling equipment requirements
- Has independent cooling capacity up to 4 kW
- High level of security, protection and monitoring
- Advanced power management enabled by IP PDUs and UPS systems
- Data center can be installed wherever you want
- Rapid installation within 4-6 weeks from projecting and commissioning
- Low cost
- Up to 50% space savings
- Tested WK2 safe lock system
- Monitoring
- IP PDU
- Power Supply
- Fire detection / extinguishing system (1U)
- Centralized management control system for the entire components
- Protection Class: IP42, IP55 Protection

#### APPLICATIONS:

- Data center for smaller companies
- Branches of banks
- TV and radio channels
- Hospitals
- Storing personal data for lawyers, doctors etc.
- Insurance companies and other businesses
- Remote installations
- Temporary installation
- Mobile applications

### Air Conditioner Unit

# WHAT we offer?

- Complete data center solution in the shortest time
- No extra cost of investment for existing infrastructure
- Safety and security at once and all
- Easy to deploy, plug & play
- Easier and quicker interference at all locations
- Minimum CAPEX and OPEX costs
- All-in-one compact solution

# DID YOU KNOW?

The Thai government has traveled nationwide and has been involved in a mobile data center that will investigate lake and river conditions in an airborne emergency such as drought or flooding. Thailand's Ministry of Science and Technology said it was the first facility in Asia to be seen. The mobile facility is equipped with "technology-wise" servers, 30 TB storage capacity, cooling and automatic fire extinguishing systems. In an emergency, the satellite was designed to operate with a broadband connection and a backup generator to run the computers for eight hours. The vehicle is moving along with six SUVs with a mobile aircraft equipped with a Mobile Mission System (MMS), a research boat and a high-resolution camera. This fleet will quickly reach areas that are inundated, detect damage, and provide the best action. With this mobile data center, the intervention period, which was previously 2-3 days, will be lowered to 20 hours.

A mobile data center is a type of data center that is designed and packaged in a small and mobile facility, usually in a standard shipping container. These small-scale data centers can easily be transported and deployed to remote and mobile locations. A mobile data center is also known as a modular data center.

A mobile data center is primarily designed to be quickly deployed and operational at locations requiring mobile computing services, such as:

- Disaster recovery operations
- Military operations
- Media broadcasts

Because of its rapid deployment and all-in-design, it can also be used as a means to complement an existing data center by serving as an additional source of computing resources.

A mobile data center typically is housed within a 20- to 40-foot shipping container or a prefabricated purpose-built data center container. A mobile data center contains:

- Multiple server racks
- Storage
- Network/Internet Support
- Power
- Cooling mechanism

Moreover, mobile data centers have a lesser cost per foot, are energy efficient and have greater density per rack than a standard data center.

# WHAT *we offer?*

- Quick delivery time
- Complete solution from the same supply point
- Safe and secure structure and application
- Easy to deploy, plug & play
- Easier and quicker use at all locations
- Various options for various needs
- Configurable, scalable, flexible

## COMPONENTS LIST

- GTDC Plus Series Rack Cabinets Inrow
- Cooling / Air Conditioner Unit Outside
- Condenser Unit
- Monitoring for Cooling Equipment Unit
- Effective power management
- Fire protection
- Electrical Panel
- Standard ISO Shipping Container
- Cable Management
- Room for Administration

### Option 1

- 4 x GT-DC Cabinets (W & D optional)
- 1 x Inrow Cooling / Air Conditioner Unit
- 2 x Modular UPS
- 1 x Fire Extinguishing Sytem
- 1 x Electrical Panel
- Monitoring Unit
- Outside Condenser Unit
- Raised Floor

### Option 2

- 4 x GT-DC Cabinets (W & D Optional)
- 1 x Air Conditioning Unit
- 1 x Modular UPS
- 1 x Fire Extinguishing System
- 1 x Electrical Panel
- Monitoring Unit
- Outside Condenser Unit
- Raised Floor

**Option 3**

- 4 x GT DC Cabinets (W & D Optional)
- 2 x Inrow Cooler
- 2 x Modular UPS
- 1 x Fire Extinguisher System
- 1 x Electrical Panel
- Monitoring Unit
- Outside Condenser Units
- Raised Floor

**Option 4**

- 4 x GT DC Cabinets (W & D Optional)
- 1 x Air Conditioner Unit
- 2 x Modular UPS
- 1 x Fire Extinguisher System
- 1 x Electrical Panel
- Monitoring Unit
- Outside Condenser Units
- Raised Floor

**Option 5**

- 4 x GT DC Cabinets (W & D Optional)
- 1 x Inrow Cooler
- 1 x Modular UPS
- 1 x Fire Extinguisher System
- 1 x Electrical Panel
- Monitoring Unit
- Outside Condenser Units
- Raised Floor

**The sample Data Center Truck includes:**

- 12 x 42U W=600mm D=1200mm GT DC Cabinets
- 3 x 42U W=300mm Inrow Cooling Units
- 1 x Fire Extinguisher System
- Monitoring Unit
- Upper Cable Management
- 2 m2 Admin Room
- Outside Condenser Units
- Raised Floor

XX= Colour Code, 02 for Light Grey RAL 7035 and 01 for Black RAL 9005, added in the order by customer.

#### Flexible Applications

- Consists of flexible assembly and easy separable components
- Copper pipe connections available at the factory and installation plates for the cooler and outdoor units are available
- Different air supply options; up blowing, down blowing, front and bottom blowing
- Cooling configurations; air-cooled, water-cooled, evaporator water-cooled, glycol-cooled and dual systems
- Rich options; ec fan, electronic expansion valve, high efficiency filter and special humidifier
- Customized solutions; high or low temperature environmental solutions, low noise solutions, high altitude solutions, high air requirements or high ESO solutions, long pipe connection or high drop solutions
- Small footprint, 100% frontal maintenance

#### Applications

- Small and medium sized IT rooms
- Equipment / hardware rooms, UPS rooms
- Telecommunication rooms
- Laboratory, test and storage rooms
- Computer rooms of businesses

#### Green and Energy-Saving

- High energy saving; Compatible with all aspects of the cooling system
- High precision heat rate; it is in the microthermal range to ensure greater air capacity design and heat rate accuracy

#### High Resistance

- To ensure that the unit has a high EER and long life, an effective and durable compressor is available.
- In order to be durable at a high level, materials of high quality brands with high industry awareness are used.
- A number of challenging tests have been applied to confirm the operability of products in difficult conditions.

#### Designed to work 7x24

- precision controlled air conditioners are designed to operate with high stability and durability without stopping 365 days x 24 hours. The unit is designed to operate in harsh weather conditions up to -40 ° C when equipped with a low temperature Kit
- Stepless external fan regulating system is available. The unit can adapt to any demanding outdoor environment.
- The thermostatic expansion valve ensures that the system reacts quickly under changing operating conditions.

In-Row (Sequential) Air Conditioning System for High Temperature Density Cabinets, Server Chambers and Data Centers

**Precision and Measurable Cooling**

Sequential precision controlled air conditioning directly cools the high temperature air from the servers, shortens the air flow line and prevents the energy from being wasted by direct mixing of hot and cold air. Real-time tracking of the heat source loads perfectly aligns the data center's high heat density problems by regulating the coolant output and the airflow as required, keeping the cooling capacity and the amount of air required to the current and predictable levels.

**Unit Configuration of Series**

- Intelligent control system
- Multiple temperature sensor sets
- Supports network control of different units
- Practical installation and maintenance
- 3 types of cooling option
- 4 types of air source outlet scenarios
- Configuration of DX unit components
- Chilled water configuration of the compressor

**Sequential Precision Controlled Air Conditioning Characteristics**

- More accurate and uninterrupted air distribution
- Real-time follow-up of heat load
- Flexible and adaptable to field applications
- Dynamic coordinated output
- Sensitive air quantity control
- Non-gradual speed regulated compressor
- Electronic expansion valve

In-Row (Sequential) Air Conditioning System for High Temperature Density Cabinets, Server Rooms and Data Centers

**Rich Flexible Matching Options**

**Flexible Enlargement Capacity**

Each FlexAir unit has a separate control system that supports floor operation mode or stand-alone operation mode. Your work can be moved and re-installed and run in the event of change.

**Modular Structural Design**

Compressed floor area provides easier service and transport. FlexAir is modularly designed in mechanical frame. The unit can be divided into several subunits. It can be easily transported even where the carrying capacity is limited. All components can be accessed from the front, with the possibility to intervene on both sides and in the rear.

**6 Variety of Frame Sizes**

The full capacity of FlexAir is produced in 6 different frame sizes, which are compatible for up and down blowing. The depth of the unit is 850mm, the height is 1960mm and the width is between 850mm and 2810mm.

**Wide Range of Cooling Capacity**

FlexAir cooling capacity is 25kW to 150kW and can be expanded to 200kW to exceed the capacity requirements of mega data centers.

**EFFECTIVE, SUSTAINABLE and SYSTEM COMPATIBLE DESIGN**

**High Strength Test Approval**

Each FlexAir product is tested and approved for operational feasibility.

**High Quality Components**

The FlexAir product is made up of quality components. Compressors, fans, valves, control system, heating and humidity system units consist of durable and long-lasting, industry-accepted brands.

**Advanced and Durable Intelligent Control System**

FlexAir's powerful control system provides efficiency, energy saving and durability.

- Group operation mode
- Remote monitoring and access possibility through common protocol
- Status and alarm indication in diagrams
- Historical records of the operating times and maintenance hours of the main components
- Password protection at different levels
- Automatic start after power failure

**7 Different Cooling Configurations**

FlexAir is available in 7 different cooling configurations; air cooled, water cooled, evaporator cooled aqueous, glycol cooled, dual water cooled and double evaporator cooled aqueous systems. The FlexAir series is recommended by us for precisely controlled cooling systems, so that the two of them can back up each other and have resistance to failure.

**Adapted Modular Structure**

FlexAir consists of high-quality modular equipment that can be adjusted to meet your data center's design needs.

- Fan Assembly
- Moisture Composition
- Adjustment Mechanism
- Heating Mechanism
- Cooling Mechanism

**High Efficiency Fan**

The Rear Radial fan provides less energy consumption, less maintenance, better air distribution and more efficient cooling than the front fan. The optional active EC fan allows for greater air flow and lower energy consumption.

**High Efficiency Scrolling Compressor**

Copeland brand high quality scrolling compressor; durability, low noise level and longer operating life.

**Highly Effective Moisturizer**

The intelligent moisture control system can automatically evacuate the moisture, suitable for the waters in different qualities.

**Electronic Expansion Valve (EGV)**

The large flow capacity and precise control characteristic of the EGV allows for a more stable starting and lower ambient temperature, better cooling, and up to 30% energy savings (optional).

**High Efficiency Heating System**

Aluminum type heater with high heat intensity minimize structure, fast warm-up, high durability, low surface temperature and long working life; operates in three different heating positions and keeps the temperature level at exactly the desired value.

**Vertical Chimney System**

It is a modular system for low cost, easy to install, GTDC cabinets, which catches the hot air inside and recycles it to the surrounding cooling systems.

**Vertical Chimney**

- Adjustable height.
- It also includes temperature, humidity, smoke sensors and mounting points for earthing.
- There is a joining system for the protection of the alignment. It is recommended to use with 1200mm deep cabinets, suitable for GT-DC series.

**Upper Cable Attachment (Optional)**

- Integrated large brush cable traverses and halls prevent them from occupying the U space and steer them to upper partitions.
- Freehand cable arrangements can be arranged through the cable extension box and these cables can be kept away from the airflow path in the chimney.

**SmartPack Central Management Software**

You can distribute power with a high-tech intelligent PDU that can be equipped with ambient monitoring sensors with a userfriendly interface for monitoring and managing the power consumption of your Data Center Cabinets. You can professionally monitor your entire energy infrastructure with the optional SmartPack central management software, which is optionally available.

**Large Product Family**

The Smart PDU family enables power distribution and monitoring for your data center cabinets. Our customer-focused, hightech intelligent PDU systems are able to perform reliable measurements with stable measurement values up to 65oC ambient temperature, +/- 1% measurement accuracy, control module with high resolution large LCD display with "Hot Swap" circuit breaker and environmental monitoring sensor hub connectivity. In addition to IP, the MODBUS PDU alternative offers an economical solution to meet different demands on the market.

PRODUCT FAMILY	TOTAL POWER	SOCKET HEAD POWER	FUSE-BOX POWER	SOCKET ON/OFF	IP	MOD BUS
MR.91	✓		✓		✓	✓
MR.92	✓		✓	✓	✓	✓
MR.93	✓	✓	✓		✓	✓
MR.94	✓	✓	✓	✓	✓	✓

**+/-1%**  
High energy measurement accuracy  
+/- 1 ̢

**ModBus Option**  
Low cost ModBus option

**Dimensions**  
Thin section (profile) construction  
Differential design with 56 cm depth  
and 56 cm width

**Mounting Advantage**  
Flexible mounting options for all  
types of rack cabinets

**Heat Resistance**  
Ability to work up to 65oC  
temperature and to read measured  
values steadily

**Relay Output Option**  
Relay output PDU provides remote  
control on active devices.

**Complete Energy Monitoring and  
Single Phase, 3 Phase Options**  
PDU-based monitoring of V, A, kW,  
kVA, kVAR, kWh, f, power factor  
parameters

**Special Production C13 / C19  
Combinations**  
Special production possibilities with  
different C13, C19 socket options.

**LCD Display**  
320x240 pixel color LCD display with all  
kinds of parameters and alarm display,  
information feature

**Sensor Options**  
Temperature, humidity, water  
detection, smoke and door sensor  
connection options. Each cabinet can  
connect up to 4 temperature and  
humidity sensors

**Colour Options**  
Black, blue and red PDU options

**Circuit Breakers (Hydraulic - Magnetic)**

Circuit breaker function which is sensitive due to hydraulicmagnetic circuit breakers and is not affected by temperature changes

**Mobile Device Compatibility**

Web interface support compatible with mobile  
devices and monitoring all data via web interface.

**Hot Swap**

Control unit that can be easily changed in  
case of faults. Servicing without  
disconnecting the smart socket

**Cascade 8 PDU**

Ability to work with up to 8 PDUs on a  
single IP to manage the system to reduce  
network traffic and use less IP

**Lockable C13 Outlets**

Ensure that the C13 outlets are stable on  
the PDU with external locking equipment

**Central Management Software** allows you to easily access your desired media and energy data via a single web interface while providing integrated monitoring and management of your computing infrastructures.

**Environment Management Workflow**

- Monitoring
- Alarm
- Management
- Reporting and Analysis
- Cabinet and room temperature, humidity, water leakage, smoke, air flow, movement, door access, light intensity, etc. monitoring of critical environment values

- Defined and critical values are transmitted by means of email, SMS, voice call, audible warning etc... incase of alarm
- Managing the information infrastructure with predefined tasks in the event of an alarm

**SYS 6001**

- Modular Structure
- 124 Sensor
- 992 Dry Contact Input
- 496 Relay Output
- 3rd party device integration
- On-Demand Software
- Advanced Alarm System
- Management of Different Devices
- Data Monitoring, Backward Reporting
- SNMP Support

**SYS 3001**

- 1 internal temperature and humidity sensor
- 16 external sensor inputs
- 16 Dry Contact Inputs
- 4 Relay Output
- 4 analogue and/or water detection cable input
- Advanced alarm system
- Management of different devices
- Data monitoring, backswept reporting
- SNMP support

**SYS 2001**

- Built-in LCD graphic display
- 1 internal temperature and humidity sensor
- 4 external sensor inputs
- 4 Dry Contact Inputs
- 2 Relay Output
- 1 Analogue and/or water detection cable input

**SYS Sensors**

- Temperature and Humidity
- Water and Smoke Detection
- Air flow
- On / Off Door Detection
- IP Camera
- Energy Monitoring

**Central Management Software** allows you to easily access your desired media and energy data via a single web interface while providing integrated monitoring and management of your computing infrastructures.

**Power Management**

The Central Management Software can inform the following critical and similar parameters by monitoring the energy consumption of the information infrastructures in data centers and remote stations in an instant and retrospective manner.

- Energy Efficiency Values (PUE)
- Energy consumption
- Carbon Footprint
- Cost of Energy
- UPS Load Value

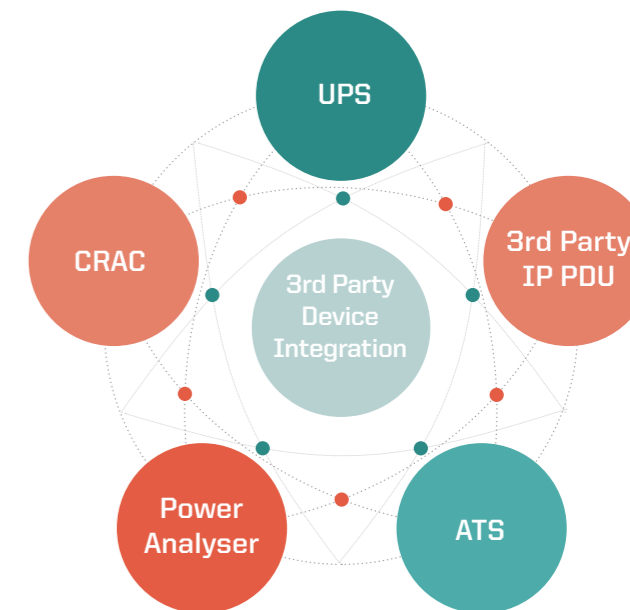

**3rd Party Device Energy Monitoring**

RS-232, RS-485, Modbus, SNMP etc. Monitoring of 3rd Party devices over protocols

- UPS
- AC Systems / CRAC
- Generator
- 3rd party Smart PDU
- UPS Load Values
- Energy analyzer
- ATS
- Rectifier etc.

**Energy IP PDU units**

The Energy IP PDU product range is a high-tech product developed entirely within Mirsan, to help you address issues such as energy efficiency in data centers.

**Central Management Software**

It is a highly secure and up-to-date software solution that enables centralized monitoring of data infrastructures in data centers, multiple branch offices and remote stations, and efficient energy management. Powerful 3rd party device integration and project-specific solutions and integrated control of information infrastructures ensure the detailed reporting of relevant data and the permanence of operation continuity.

**Environmental Monitoring Reports**

- Efficient Energy Use (PUE) Reports
- Carbon Emission Reports
- Energy Consumption Reports
- Energy Cost Reports
- Cooling Capacity Reports
- Energy Trend Reports

**Graphical and Numerical Reports**

- Temperature, humidity, air flow, air quality, energy etc. detailed reports
- Water leak, smoke, shaking, movement etc. alarm reports
- Remote station reports
- Link failure reports

Can be designed according to all brand and models

**AERESOL AUTOMATIC FIRE EXTINGUISHING SYSTEM**

Aerosol fire extinguisher generators, manual, fully automatic, semi-automatic, electrical or pyrotechnic cables. Regardless of your brand of existing fire detection systems, they can be addressed or traditionally triggered and activated in an adaptive manner. After activation, the solid potassium carbonate molecules migrate into the fire as a fog in 0.5 micron particles. It forms more radical compounds with chemical elements that perform the combustion reaction. During extinguishment, the oxygen level in the environment will not drop below 17%.

- Re-filling - Calibration - No cost of testing, 10 years shelf life.
- No complete sealing condition, no labor costs.
- No pipe installation, no installation work.
- During the extinguishment it does not damage the goods, does not leave residue, harmless to human beings in the environment.
- Certificates are valid all the time when contained in the facility
- There is no risk or threat to the area.

**AIP**  
Access Interface Card Reader → **3415**

The access interfaces are user interface devices, allowing access by reading a RFID card on the side by entering a password. Access interfaces are visually and audibly informed to the user as to whether or not the visual warning LEDs and the buzzer input test are accepted.

These interfaces are used with monitoring and access control units. (MCU-3401, ACU Plus-3403 and ACU-3402)

RFID Card: 13.56Mhz MIFARE-Standard ISO 14443A it is also added

Printed: {34002639} / Unprinted: {34002640}

## ACCESSORIES

AC-DC Power  
Supply 12 Volts DC  
3 Amps {34002625}

- Universal voltage input
- Continuous power up to 36 W
- Variable AC blades for global use
- Used with monitoring and access control units

Electronic arm lock connection cable 4 meters  
{34030006}

- Used to link the lever locks to standalone access interfaces and access control units
- The same connector is plugged on both ends of the cable

Electronic arm lock connection cable 0.4 meter  
{34030039}

- Used to link the lever locks to standalone access interfaces
- The same connector is plugged on both ends of the cable

AC-DC Power  
Supply 12 Volts DC  
1 Amps {34030041}

- Universal voltage input
- Continuous power up to 12 W
- Used with standalone access interfaces

ACU-AI connection cable 4 metre  
{34030040}

- Used to connect access interfaces (AIK-3414 and AIP-3415) to monitoring and access control units

Metal Cover Application

Magnetic Front Door Application

19" Magnetic Holder Panel

Magnetic Holders

Magnetic Rear Door Application

XX=Colour Code, 02 for Light Grey RAL 7035 and 01 for Black RAL 9005, added in the order by customer.

19" 1U rack consoles provide easy access and management of PCs and servers with integrated KVM switch options. These solutions are designed for accessing and managing your servers in a data center / system room over a brand independent platform during the local usage phase.

- 17" LED / LCD Display Option in 1U 19" Construction
- 1U telescopic railed case
- Integrated Monitor / Klee / Touchpad / Ergonomic design
- IP / Analog Product option
- Multiple Platform Support: Windows 2000 / XP / Vista Linux
- 1/8/16 Port Option
- USB / PS / 2 Product Design
- Compatibility with all Server Manufacturers
- Plug and Play Construction
- Automatic Part Scanning
- Password Protection Feature
- Front Screen Display
- The angle to open the monitor is 120 degrees.
- Locked front panel

It is an intelligent device that can be used for monitoring environmental changes such as temperature, humidity, smoke, water pressure. When the sensor values exceed the specified threshold values, the system warns the user via e-mail. It is suitable for data centers, co-location centers, Web hosting facilities, telecom cabins or any unmanned area to be monitored.

- 1 Ethernet Port 10/100
- 2 USB 2.0
- 3 8 x Analog Sensor
- 4 LED
- 5 2 x Access Interface
- 6 2 x Lockouts
- 7 2 x Electronic Arm Locks (3101, 3102, 3103, 3104)
- 8 Power Input (12VDC 3A)
- 9 4 x Relay Outputs (10A)
- 10 2 x Dry Contact Outputs (2A)
- 11 8 x Dry Contact Inputs
- 12 1 - Wire Sensor Port

- Monitors and manages environmental conditions and security conditions over IP
- Monitoring and configuration via management software
- Can generate alarms with customizable input parameters

- Two access interfaces (3414 or 3415) can be connected
- When any monitored environmental conditions exceed the user-specified limits, the warnings are transmitted to the user using email.

- User Database
- A large range of sensors
- The cabinet provides physical access control

**Management Software**

- Edit sensor thresholds, set automatic operations and alarm rules
- Monitor current sensor values and alarm conditions
- Configure network settings (IP address, subnet mask, default gateway, (DNS, etc.), and user management settings Add and remove users
- View and delete event records

**Relay Outputs**

- 4 relay outputs to control external connected devices
- Outputs can be used as NO (Normally Open) or NC (Normally Closed)

**Dry Contact Inputs**

- 8 dry contact inputs for monitoring environmental changes
- Inputs can be used as sensor inputs

**Analog Sensors**

- 8 analogue sensor inputs for monitoring environmental changes
- All Mesan analog sensors can be connected

**Arm Locks**

- Lever lockout controls physical access to cabin
- Electronic locks with group codes 3101, 3102, 3103 and 3104 can be connected

**Dry Contact Outputs**

- 2 dry contact outputs to control external connected devices
- Outputs can be used as NO (Normally Open) or NC (Normally Closed)

**Wire Sensors**

- 1 piece of wire sensor such as DS18B20 and DS1190 can be connected to monitor environmental changes

**Access Interfaces**

- Access to the card is provided by entering the password
- 3414-AIK and 3415-AIP devices can be connected

**Lockouts**

- Lockouts control physical access to cabinets
- Various electronic locks can be connected

It is an intelligent device that can be used for monitoring environmental changes such as temperature, humidity, smoke, water pressure. It checks the electronic locks and monitors the door status. It is suitable for data centers, co-location centers, Web hosting facilities, telecom cabins or any unmanned area to be monitored.

- 1 Dry Contact Output (2A)
- 2 4 x Dry Contact Input
- 3 2 x Analog Ssensor
- 4 LED
- 5 USB 2.0
- 6 Ethernet Port 10/100
- 7 Power Input (12VDC 3A)
- 8 2 x Access Interface
- 9 2 x Lockouts
- 10 2 x Electronic Arm Locks (3101, 3102, 3103, 3104)

- Monitors and manages environmental conditions and security conditions over IP
- Monitoring and configuration via management software
- There are two sensor inputs to detect the position of the door.

- Can generate alarms with customizable input parameters
- When any monitored environmental conditions exceed the user-specified limits, the warnings are transmitted to the user using e-mail.

- Two access interfaces (3414 or 3415) can be connected
- Contains User Database
- A large range of sensors
- Provides physical access control to the cabinets

**Management Software**

- Edit sensor thresholds, set automatic operations and alarm rules
- Monitor current sensor values and alarm conditions
- Configure network settings (IP address, subnet mask, default gateway, (DNS, etc.), and user management settings
- Add and remove users
- View and delete event records

**Dry Contact Output**

- Dry contact output to control external connected devices
- Outputs can be used as NO (Normally Open) or NC (Normally Closed).

**Dry Contact Input**

- 4 dry contacts input for monitoring environmental changes
- Inputs can be used as sensor inputs

**Analog Sensors**

- 2 analogue sensor inputs for monitoring environmental changes
- All Mesan analog sensors can be connected

**Arm Locks**

- Lever lockout controls physical access to cabin
- Electronic locks with group codes 3101, 3102, 3103 and 3104 can be connected
